

About Telephonics

Telephonics is a locally owned and operated Telecommunications company which was formed in February 1995. Our technical staff specialise in meeting the needs of each individual client.

Telephonics was formed with the idea to provide customers within the central region with a top-quality service at an affordable price. Clients can feel safe in the knowledge that their value as a customer is important to us whether we are tendering for a large project or installing a single jack-point into your office. The corner stone of Telephonics is, and always will be, a quality, reliable, fast and friendly service.

The staff at Telephonics are fully certified to install the latest computer cabling systems and work successively with national cabling companies to provide the ideal communication solution to meet customer needs.

In the case of servicing companies with multiple locations throughout New Zealand, Telephonics holds the support of a nationwide network of independent dealers, which means no installation or cabling job is too big. Our local customers have peace of mind with our 24/7 call out service with a response time of less than 4 hours guaranteed.

How can Telephonics Help?

Telephonics VOIP Phone System

**Telephonics helping you work
Smarter not harder**

Whats VOIP and how can it help me and my business?

VoIP stands for Voice over Internet Protocol. VoIP has a lot of advantages. Traditional telephone lines are all but obsolete and are increasingly unreliable. VOIP enable calls to use the internet and network which reduces the cost and downtime for business-critical services.

The main reasons for the great increase in businesses turning to VoIP technology are the cost, flexibility and system features that you get with VOIP.

VoIP is a way to cut down communication cost through adding more options of interaction between employees and with customers, so that the system becomes more efficient and of better quality. For example:

Your workforce can use your communications system from home or on the road.

You can easily add, move, or change phone extensions and locations, which saves money and gives you more flexibility.

Unified communications enable greater ability for voice, video chat, Web conference, and instant messaging.

Multiple devices can be connect including IP phones, mobiles, laptops, tablets web conferencing solutions, CCTV.
